Mutual Fund Investments are subject to market risks, read all scheme related documents carefully.

Pramerica is the brand name used by Prudential Financial, Inc. ("PFI") of the United States and its affiliates in select countries outside of the United States. Neither PFI nor any of the named Pramerica entities are affiliated in any manner with Prudential plc, a company incorporated in the United Kingdom.

*As per the present tax laws, eligible investors (individual/ HUF) are entitled to deduction from their gross total income, of the amount invested in equity linked saving scheme (ELSS) upto ₹1,50,000/- (along with other prescribed investments) under Section 80C of the Income Tax Act, 1961. Tax savings of ₹46,350/- shown above is calculated for the highest income tax slab. Additionally, long term capital gains tax is exempt on equity oriented funds. Tax benefits are subject to the provisions of the Income Tax Act, 1961 and are subject to amendments, from time to time. [#] ELSS as a category has delivered average annualized returns of 18.90% p.a. for last 3 years and 17.13% p.a. for last 5 years (Source: CRISIL-AMFI ELSS Fund Performance Index. Data as on March 31, 2017). Past performance may or may not be sustained in the future. ELSS has the shortest lock-in period of 3 years, as compared to other tax saving instruments which have a minimum lock-in of 5 years.

Equity Market

The market that was

The new financial year has started with a positive note with NIFTY and NIFTY midcap index gaining 1.4% and 5% respectively and midcaps continuing to outperform. Sector wise realty, cement and energy were strong during the month while software, metals and pharma being weak led by rupee appreciation.

Result season has started on a mixed note, with HDFC Bank and Reliance Industries leading the pack and the IT heavy weights slightly under the weather. Overall banks, having the largest weight, have done well – on earnings, operational parameters as well as stock market performance despite RBIs directives on slippages leading to higher provisioning.

Macro numbers published during the last month were soft (IIP at 4 month low at -1.2% growth led by decline in manufacturing and lower demand in capital and consumer goods, retail inflation inching up) coupled with RBIs hawkish stance. However, all eyes would be on GST and its rollout and the tier classification is being awaited. Commodity prices were largely muted across the board following global uncertainties.

Going Forward

Cash levels with domestic mutual funds have been at elevated levels which may see some deployment while inflows led by SIPs continue to be robust for the industry. With demonetization largely behind us, the onset of a normal monsoon (as per IMDs initial assessment) and implementation of GST augurs well for the consumption sector. Steps taken by the government to curtail and manage NPAs in the financial system are taking shape and would promote financial stability in the system.

While global geo-political situation is showing some signs of instability, we believe India should relatively do well given strong inherent factors such as demographics, a positive policy regime and consumption led growth. A strong rupee and weak oil prices also provide some comfort on the fiscal deficit front, though export volume growth needs to pick up to make up the negative offset.

Overall we are positive on the medium to long term prospects of the Indian economy and equities in general. While government capex has steadied the ship so far, improving balance sheets and judicious fund raising should improve the balance sheet of private sector and kick start private sector capex as well in the medium term. We have the right ingredients for a secular and structural growth story and short term volatility notwithstanding, India offers a strong wealth creation opportunity which should not be missed.

REPO	6.25%	6.25%	0

Source: RBI Weekly Statistical Supplement & Bloomberg

Inflation

After printing at 3.65% in February, CPI rose marginally to 3.85% for March, thus staying below the 4% target that RBI has set for itself. Food inflation continued to rise albeit marginally, up by 10 bps over the previous month to touch 2.5%. Pulse prices continued to soften declining 5.5%. Since November Pulse prices have fallen by over 17%.

Liquidity and Rates

Overall liquidity conditions remained benign in April continuing the trend witnessed post November. Specifically, the monetary policy had sought to address liquidity issues as surplus system liquidity post November, has been contrary to RBI's stated preference for 'neutral liquidity'.

While system liquidity has been declining gradually from the peak levels of INR 7.95 trillion witnessed in January, the average system level liquidity reigned around INR 4.0-5.0 trillion. Overnight rates have hovered midway in the band between the repo and reverse repo, fixing between 5.75-5.90%, pre-policy. Post the narrowing of the corridor, overnight rates moved higher to a level between 6.0-6.10%.

Yields on short end money market securities also inched higher in line with the upward movement in the reverse repo levels. Given the start of the new fiscal, we expect Government spend to pick up as has been the case in the previous two years under the new regime. This should further lead to improving of liquidity in the system.

During the month RBI announced liquidity suction through the issuance of MSS bonds of slightly longer tenor (March 2018 maturity) aggregating INR 1 trillion. The issuance to be spread over 4 weeks would help in draining out some liquidity from the system. Nevertheless, we still expect the system to remain adequately in surplus even after the drain out. This should help in keeping the short end rates soft and closer to the overnight rates.

Fund Manager's view

The monetary policy saw the MPC largely reiterating its concerns on inflation pressures persisting, as being witnessed in firmer prices in Services. The MPC also referred to some return in pricing power for firms as underlying demand conditions improve post demonetization. RBI also noted a gradual shrinking in the output gap (spare aggregate capacity available) which could have some implications for future inflation.

Even as CPI has been well below the 4%, RBI alluded to the recent upmove in CPI and an expected 'uneven' inflation trajectory expected in H2-FY18, that could be further challenged by waning base effects and upside risks.

The long end has been readjusting higher gradually post the policy as it was clear that any imminent softening appears unlikely and there exist some upside risks to inflation that could arise from an uncertain monsoon expectation and external uncertainties. Besides fresh supply for FY 18 has commenced. Absorption of supply could be impacted by the fact that RBI OMOs which were prevalent in the last two years as part of liquidity infusion measures is largely expected to remain absent in FY 18, given surplus liquidity conditions. Lack of positive triggers are expected to push up the long end yields gradually.

With no major positive triggers at present, our preference is to continue to remain positioned in the mid segment of the yield curve. We would advise investors to consider / staying invested in duration products with average maturity ranging from 2-6 years. Investors preferring lesser volatility are advised to stay at the short / mid segment of the curve through the selection of products with average maturities between 1-3 years.

DHFL Pramerica Short Term Floating Rate Fund (An Open Ended Income Scheme)

Rated AAAMfs by ICRA**

Details as on April 28, 2017

This product is suitable for investors who are seeking*

- Income over the short term
- Investment in short term debt and money market instruments
- Degree of risk – MODERATELY LOW

* Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Moderately Low — investors understand that their principal will be at moderately low risk.

Fund Details

Investment Objective: The objective of the scheme is to generate regular income through investment in a portfolio comprising primarily in short maturity floating rate debt/money market instruments.

However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

Fund Manager: Mr. Rakesh Suri (Over 17 years of experience in Fixed Income Markets) and Mr. Nitish Gupta (Over 20 years of experience in fund management, trading and research)

Benchmark: CRISIL Short Term Bond Fund Index

Option: Dividend (Daily Reinvestment only, Weekly, Monthly, Quarterly & Annual - Payout/Reinvestment/Sweep) and Growth.

Quarterly (Jan-Mar 2017) Average AUM (₹ in Cr): 974.89

Monthly Average AUM (₹ in Cr): 930.69

AUM as on 28/04/2017 (₹ in Cr): 1,031.44

Average Maturity: 1.20 yrs

Modified Duration: 1.05 yrs **Portfolio Yield:** 7.09%

Fund Manager's Report: The fund is invested in a mix of March '17 maturity Bank CDs and partly in high quality (AAA) Corporate Bonds. The Fund Manager alters the mix based on relative attractiveness of money market holdings (CDs) vis-a-vis short term (2-3 years) high grade bonds.

@@ Total Expense Ratio is weighted average for the month. Ratio excludes service tax on management fees.

ICRA has assigned the "ICRA] AAAMs" (pronounced as ICRA triple A m f s) rating to the DHFL Pramerica Insta Cash Plus Fund, DHFL Pramerica Ultra Short Term Fund, DHFL Pramerica Short Term Floating Rate Fund, DHFL Pramerica Banking and PSU Debt Fund, DHFL Pramerica Dynamic Bond Fund, DHFL Pramerica Medium Term Income Fund and DHFL Pramerica Premier Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made.

The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns For complete rating scale and definitions please refer to ICRA's Website www.icra.in or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores".

These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

How to read the Factsheet

Fund Manager:

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP:

SIP or systematic investment plan works on the principle of making periodic investment of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV:

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10- year Gsec.

Entry Load:

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1%, the redemption price would be Rs. 99 per unit.

Modified Duration:

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation:

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio:

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta:

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM:

AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings:

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme:

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Portfolio Turnover:

Portfolio Turnover is a measure of how frequently assets within a fund are bought and sold by the managers.

R-Squared:

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Average Maturity:

In a mutual fund containing debt securities, Average Maturity is the average amount of time until the debt securities mature.

Portfolio Yield:

Portfolio Yield is computed by determining the cash flows for the portfolio and determining the interest rate that will make the present value of the cash flows equal to the market value of the portfolio.

Total Expense Ratio:

Weighted Average i.e. Total Expense of the month / average Asset / number of days in month* days in a year.

Stop trying to time the market ! Invest in a P/E based strategy

In the equity markets, one should invest when the valuation (P/E) is low, not the index level. Simply put we should invest when market is cheaper and the P/E ratio helps us decide this.

- Methodology adopted for P/E based Strategy illustrations:
 - Asset allocation is done on the basis of the table shown here;
 - The equity market/component is represented by NIFTY 50;
 - The balance allocation (i.e. portfolio value minus equity allocation) is considered as debt component;
 - Debt component returns is considered at 6% per annum for the calculation purpose;
 - Any allocation into or out of equity is carried out on the first working day of the month;
 - Variation is defined as the deviation of 20 day Average trailing P/E of NIFTY 50 as at the month-end, compared with its Long-Term Average P/E (i.e. from 1st Jan. 1999).
