Waiting for the right time to invest?

Dear Investors and Partners,

The Indian market's journey from its humble beginning in 1986 has been nothing short of spectacular. It took over two decades for the Sensex to reach 10,000 mark in 2006 and just another year to double in 2007. The S&P BSE Sensex surpassed 20K in December 2007.

As investors cheered this achievement, the euphoria turned into gloom. The reverberations of global financial meltdown sent shockwaves across the globe – Sensex witnessed a drawdown of -61% during 2008-10. Maximum Drawdown is a measure of the biggest drop in the value of an investment from its peak to its lowest point over a certain period of time. It shows the largest loss you could have faced if you bought at the highest point and sold at the lowest.

Naturally, many investors were unnerved by this meltdown and rushed to either exit or refrain from investing during this crash. As the world recovered from this shock, Sensex recovered to its previous high by 2010, in two years. It took the Sensex a decade to add 10K points to reach 30K level in 2017 from 20K in 2007. In September 2024, Sensex crossed another milestone of 85000. The growth reflects the underlying macroeconomic shifts in the Indian economy. India's weightage in the MSCI Emerging Markets Index has increased from around 6% a decade back to 20% in 2024. (Source: MSCI). Recently, India (2.35%) toppled China (2.24%) to become the sixth largest market in MSCI Global Index.

Owing to sustained domestic inflows in the recent past, the number of days taken for recovery from drawdowns is getting shorter and investors waiting on the sidelines risk missing out the rally. It's difficult to predict market movements but it is reasonable to infer in hindsight that investing at dips/market corrections can provide a reasonable upside for investors who have the patience and conviction to ride through the volatility. Hence, the best approach would be to stay put.

We combed through some data from January 2006 till September 2024 to see the impact of missing the best days in Sensex versus staying invested for this entire time period. The below table shows the return earned by different set of investors (time period of missing out the best days by staying out of the market). Evidently, those who have exercised patience by staying invested throughout this over 18-year period have earned CAGR of 14%. Missing even the five best days can hurt your portfolio with three percentage points lower return while those who have missed the 50 best days ended up earning negative -1%. One simple way to overcome this behavioral challenge is to invest through Systematic Investment Plan (SIP) so that you do not miss out on those days. For a vast majority of investors, this staggered approach to investing takes the "timing the market" aspect out of the equation.

Impact of Missing the Best Day in Market

Time Period	Times	CAGR (%)
Entire Period	11.68X	14%
MISSING BEST 5 DAYS	7.34X	11%
MISSING BEST 10 DAYS	5.39X	9%
MISSING BEST 20 DAYS	3.13X	6%
MISSING BEST 30 DAYS	1.93X	4%
MISSING BEST 40 DAYS	1.27X	1%
MISSING BEST 50 DAYS	0.87X	-1%

Jan 2, 2006-Sep 25, 2024. BSE Sensex TRI

Thus, at the cost of sounding preachy, what we can conclude is that lazy investors who didn't react to news/events by taking action have performed better than those who stayed out of markets fearing correction or waiting for the 'right' time to enter.

The right time is now

As investors, you would be bombarded with headlines of markets reaching all-time-high. But markets have tested many all-time-highs in the past and basing your investment decisions on these levels can be counterproductive.

"The best time to plant a tree was twenty years ago. The second best is now," goes the timeless adage. If you have never invested in equities and are waiting for the opportune time to enter when markets correct, you may be left waiting. Rather, you could start investing to plan for life goals by consulting your trusted financial advisor and not ponder over the right time to start.

Investors would do well to take action based the following triggers:

- Following a goal based investing approach helps you stay focused on your investment journey irrespective of what's happening in the market. If your current asset allocation has drifted from its original target, it is wise to prune your exposure back to your desired asset allocation.
- The second instance when you can realign your portfolio is when you are nearing a goal. Around 6 to 12 months before approaching a goal, you can start shifting your corpus into Conservative Hybrid Funds to shield the corpus from the vagaries of market.
- The third instance when you can look to tweak your portfolio is when your funds are not living up to their stated mandate and removing/adding new ones would add value through diversification not just through market cap but also investment styles such as value, growth, momentum and quality. For investors who are keen to make the most of volatility, keeping some dry powder for tactical allocations can also be considered.

For those who are worried about mixed cues of geopolitical situation, Sensex reaching all time high and intermittent volatility, participating in equities through Balanced Advantage Funds/ Dynamic Asset Allocation Funds or even Multi Asset Funds would be a good option as these funds have an in-built model to take the asset allocation on your behalf and also provide the benefit of diversification.

To sum up, markets will continue to be driven by human innovation and growth with intermittent corrections on the way. Thus, once you have invested based on your risk appetite and goals, you should review your portfolio periodically with the help of a trusted advisor and try to stay the course till your goals are met.

Keep Investing!

Equity Market

The Nifty ended the month with a 2.3% gain, while the Midcap and Smallcap indices underperformed with returns of +1.5% and -0.7%, respectively. With a sedate start to the month and followed by a large interest rate cut by the US Federal Reserve and stimulus measures by China, there was a positive impact on the markets as well. Not surprisingly, metals sector emerged as the top performing sector for the month rising 7% in the month. Consumer durables and power sectors were also up 6% and 5%, respectively, while Oil & gas, and IT sectors declined by 4% and 3%, respectively. At the beginning of the month, investors remained cautious ahead of the key US economy data release. INR was down 0.1% at Rs.83.8 vs USD and India 10Y yields decreased by 11bps during the month to 6.75%. FPIs bought US\$6.7 bn of Indian equities in the secondary market whereas DIIs bought US\$3.8 bn. FIIs net bought \$11.8bn in CYTD24. On the other hand, DIIs have continued to remain net buyers to the tune of \$40.8bn in CYTD. Within DIIs, Mutual Funds have been the key buyers, contributing \$31.9bn buying.

On the economy front, CPI inflation inched up marginally to 3.7% in August, from 3.5% in July. India's WPI eased to 1.3% in August 2024 from 2% in July, primarily due to moderation across all sub-components and fuel and power inflation turning negative. IIP growth in July firmed up to 4.8% compared to an upwardly revised June reading of 4.7%. Goods trade deficit widened to \$29.7 Bn in August 2024, the highest in ten months. This was driven by a 9.3% drop in overall goods exports and 3.3% YoY growth in imports. The current account in 1QFY25 moved back to a deficit of US\$9.8 bn (1.1% of GDP)—4QFY24 current account surplus was revised down to US\$4.6 bn. GST revenue for the month of September 2024 stood at 1.73tn, higher 6.5% YoY.

HSBC August Manufacturing PMI came at eight month low of 56.5 in September vs 57.5 in August. The South-West monsoon in India has been above normal (~8% above average), in line with the Indian Meteorological Department's (IMD) forecast. The spatial distribution of rainfall has been promising. The core monsoon zone has enjoyed excess rainfall (~23% above average). A healthy monsoon leading to higher soil moisture and reservoir levels (at ~87% of capacity as against long period average of 76% and previous year average of 73%) paves the way for an excellent Rabi season ahead.

Debt Market

The bullish sentiment in the bond markets continued in September as the US Fed started its rate cutting cycle with 50bps. Yields moved down across the curve by 10-12 bps on the back of the optimism fuelled by the expectations of acceleration in the global monetary easing cycle. There was some volatility towards the end of the month and bond yields inched higher towards the end of the month as the geopolitical situation in the middle east deteriorated.

The central government calendar for the second half of FY25 was released. Certain sections of the market were expecting a lower number/lower duration supply but it did not materialise as the government stuck to the budgeted numbers though the T-bill Issuance has been lowered. To ease the quarter end liquidity, government had also cancelled couple of T-bill auctions.

The CPI inflation came in a tad higher than expected at 3.65%, on higher food prices even as 'core inflation' remained steady at 3.40%. WPI inflation slowed to 1.31% compared to 2.04% in July. Lower commodity prices supported lower WPI. Core WPI inflation weakened to 0.70% from 1.20% in July. Going ahead, we expect WPI to increase with a less favourable base and on flat domestic inflation components as compared to lower imported inflation. The RBI state of the economy report highlighted that the worst of food inflation that drove up headline inflation may be behind us as there are signs that the vegetable price shocks are easing trade deficit for the month of August (released in September) widened to USD29.7 bn from USD23.6 bn in July. High gold imports contributed to the elevated trade deficit. Gold imports rose to USD10.1 bn compared to the July gold imports of USD 3.1bn.

Freight rates have surged nearly 70% YoY across Indian ports, reflecting global shipment disruptions, sustained demand and capacity constraints. This increase comes after a gap of two years and can potentially add to the burden of corporates. Goods & Services Tax (GST) collections rose 6.50% in September to Rs. 1.73 lac cr, the slowest growth over the last three years, suggesting some slowdown. GST revenues for the upcoming festive season will be keenly watched for any signs of a sustained slowdown. RBI released its audit report on Gold Loan NBFCs in the backdrop of record gold loan growth across banks and NBFCs. Gold Loan sanctions in Q1FY25 grew 26% YoY and 32% over the March quarter. RBI's sectoral data on bank credit for Aug 2024 shows that gold loans grew nearly 41% on a YoY basis.

Monsoons were satisfactory this year with the highest rainfall since 2020 and recording the lowest number of sub divisions (3 out of 36) with deficient rains. Overall, the monsoon is set to be 7-8% higher than the long period average (LPA), thus falling under the 'above normal' category. This marks the sixth year in a row that India has witnessed normal to above normal rainfall in the season. Rains in late September, particularly in UP, augur well for soil moisture for Rabi crops which will be sown from late October onwards. Central India had the highest surplus with 20% higher than normal rainfall. The three new external members of the MPC were announced ahead of the MPC

System non-food credit grew 13.3% YoY as of 06 Sep 2024, while the deposits grew 11.3% YoY. Outstanding Loan-to-Deposit ratio (LDR) was at 78%. Retail and Services (14% YoY) continued to drive the loan growth while industrial credit is still subdued at 10% YoY. Market regulator SEBI announced measures to restrain the growing participation of retail investors in equity derivatives market. India's MPC committee has been in pause mode for the past 9 monetary policy meets and RBI Governor continues to highlight that they would wait for inflation cool-down before a change in monetary policy direction.

Outlook

We remain optimistic of the long-term growth prospects of the Indian economy and Indian capital markets, aided by healthy GDP growth forecast, positive policy environment, investment focus on asset creation backed by reasonable fiscal prudence. However, from a near- to medium term perspective, we seem to have borrowed some returns from the future. Euphoria appears to be building up in some segments of the market, which we call as micro bubbles, like low growth and low quality small and mid-caps, IPO markets, some PSU companies and select pockets of capital goods sectors like railways and defense. Investors are advised to remain cautious of investing in companies with in these micro bubbles.

From a regional perspective, we are also witnessing buoyancy in China's capital markets led by stimulus measures. While this was much needed given the relatively struggling economy, the effectiveness and sustainability of the same has to be seen in times to come. However, global fund flows shifting to some extent to China cannot be ruled out.

We reckon it is best to remain invested in opportunities where growth is visible and structural, run by competent managements and having good capital allocation track records. With the ultimate objective of creating long term wealth, it is also important to protect downsides. Staying in the growth and quality buckets affords us the luxury of both.

meeting on October 9th. The three new members are Prof. Ram Singh, Director – Delhi School of Economics, Dr. Nagesh Kumar, Director & Chief Executive - Institute for studies in Industrial Development and Saugata Bhattacharya (Economist).

FPI inflows into debt accelerated as inflows topped USD 4bn in September with the cumulative YTD CY25 FPI inflows into debt crossing USD 17bn even as INR depreciated due to geopolitical issues and a bounce in the Dollar Index. Money market yields remained at elevated levels seen during the quarter end as liquidity tightened due to advance tax outflows. In a positive development, FTSE Russell told investors that it had very positive meetings with India's securities regulator on access to the bond market, ahead of its decision on the review to include India's Fully Accessible Route (FAR) bonds on Oct 8th.

Global Bond yields also cooled off with the benchmark US 10yr bond yield down by 12bps on back of the start of monetary easing by the US Fed. China announce aggressive monetary easing with both policy rates and reserve ratio being lowered.

The rate cutting cycle in the developed markets has started in right earnest though in the domestic context given the current growth/inflation dynamics and the continuing endeavour of RBI to narrow the wedge between the deposit and the credit growth rates, we believe that rate cut in India is likely to start from December 2024. Markets tend to react before the start of a rate cutting cycle and any retracement in yields from current levels offers a good opportunity to investors to increase their allocation to fixed income as real and nominal yields remain attractive with favourable demand supply dynamics playing out in the sovereign bond market. We expect the 10yr benchmark bond yield to keep drifting lower gradually and converge with the policy repo rate before the start of the rate cutting cycle.

Monthly Fixed Income Table

PGIM INDIA BALANCED ADVANTAGE FUND

An open ended dynamic asset allocation fund

Details as on September 30, 2024

This product is suitable for investors who are seeking*

- Capital appreciation over a long period of time
- Investment in equity and equity related securities including the use of equity derivatives strategies and arbitrage opportunities with balance exposure in debt and money market instruments.
- Degree of risk – VERY HIGH

* Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Scheme Riskometer

Very High — investors understand that their principal will be at very high risk.

Benchmark Riskometer

AMFI Tier 1 Benchmark - CRISIL Hybrid 50+50 Moderate Index
Benchmark riskometer is at high risk

Fund Details

Investment Objective: To provide capital appreciation and income distribution to the investors by dynamically managing the asset allocation between equity and fixed income using equity derivatives strategies, arbitrage opportunities and pure equity investments. The scheme seeks to reduce the volatility by diversifying the assets across equity and fixed income. However, there can be no assurance that the investment objective of the Scheme will be achieved. The Scheme does not guarantee/ indicate any returns.

Fund Manager: (w.e.f. April 15, 2024) Mr. Utsav Mehta (Equity Portion) (Over 13 years of experience in Equity market, research and fund management); (w.e.f. April 01, 2023) Mr. Anandha Padmanabhan Anjeneyan (Equity Portion) (Over 15 years of experience in Equity Market); (w.e.f. April 01, 2023) Mr. Vinay Paharia (Equity Portion) (Over 20 years of experience in Indian financial markets, primarily in equity research & Fund Management); (w.e.f. March 29, 2024) Mr. Chetan Gindodia (Overseas Investments) (8 years of experience in equity research) and (w.e.f. December 01, 2021) Mr. Puneet Pal (Debt Portion) (Over 22 years of experience in Debt Market).

**Total Expense Ratio for PGIM India Emerging Markets Equity Fund, PGIM India Global Equity Opportunities Fund and PGIM India Global Select Real Estate Securities Fund Of Fund is inclusive of expense of the underlying fund.

ICRA has assigned the "[ICRA]A1+mfs" (pronounced as ICRA A one plus m f s) rating to the PGIM India Overnight Fund, PGIM India Liquid Fund, PGIM India Ultra Short Duration Fund and PGIM India Money Market Fund. Schemes with "[ICRA]A1mfs" rating are considered to have very strong degree of safety regarding timely receipt of payments from the investments that they have made. Modifier {"+" (plus)} can be used with the rating symbol to reflect the comparative standing within the category.

ICRA has assigned the "[ICRA]AAA mfs" (pronounced as ICRA triple A m f s) rating to the PGIM India Dynamic Bond Fund and PGIM India Corporate Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made.

The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns. For complete rating scale and definitions please refer to ICRA's Website www.icra.in in or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes.

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores".

These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

SIP Performance (CAGR)

Details as on September 30, 2024

The fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested ₹ 10,000 on the 1st Business day of every month over a period of time

[^]Benchmark. The above performance is for Regular Plan - Growth Option. Different plans have a different expense structure. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.

How to read the Factsheet

Fund Manager:

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP:

SIP or systematic investment plan works on the principle of making periodic investment of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10- year Gsec.

Entry Load:

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/ agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1%, the redemption price would be Rs. 99 per unit.

Modified Duration:

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Macaulay Duration:

The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

Standard Deviation:

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio:

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta:

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM:

AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings:

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme:

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Portfolio Turnover:

Portfolio Turnover is a measure of how frequently assets within a fund are bought and sold by the managers.

R-Squared:

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Average Maturity:

In a mutual fund containing debt securities, Average Maturity is the average amount of time until the debt securities mature.

Portfolio Yield:

Portfolio Yield is computed by determining the cash flows for the portfolio and determining the interest rate that will make the present value of the cash flows equal to the market value of the portfolio.

Total Expense Ratio:

Weighted Average i.e. Total Expense of the month / average Asset / number of days in month* days in a year.

PGIM India Balanced Advantage Fund (Details as on September 30, 2024)	
Long - term (15 year) Average P/E of Nifty 500	23.07
Last 20 Days Average of Nifty 500 P/E	27.47
P/E Variation	19%
Applicable P/E Variation Table	Rising
Applicable P/E Variation Band	Between 11% and 20%
Portfolio action for the month	Maintain Existing Equity Exposure
Directional Equity Allocation	50.38%

Variation* from Long Term average P/E	Rising Variation***
Less than - 20%	Directional equity exposure 100%
Between -20% and -11%	Maintains existing equity exposure plus switches 50% of debt to equity for every monthly observation
Between -10% and 0%	Maintains existing equity exposure plus switches 10% of debt to equity for every monthly observation
Between 1% and 10%	Maintains existing equity exposure
Between 11% and 20%	Maintains existing equity exposure
Between 21% and 30%	Maintains existing equity exposure
Between 31% and 40%	Shifts 50% money from equity to debt for every monthly observation **
Above 40%	Directional equity exposure 30%

Variation* from Long Term average P/E	Falling Variation***
Above 40%	Directional equity exposure 30%
Between 31% and 40%	Shifts 50% money from equity to debt for every monthly observation **
Between 21% and 30%	Directional equity exposure 50%
Between 11% and 20%	Directional equity exposure 50%
Between 1% and 10%	Directional equity exposure 65%
Between -10% and 0%	Maintains existing equity exposure plus switches 10% of debt to equity for every monthly observation
Between -20% and -11%	Maintains existing equity exposure plus switches 50% of debt to equity for every monthly observation
Less than - 20%	Directional equity exposure 100%

* P/E variation is defined as the deviation of trailing P/E of Nifty 500 Index (observed on a 20 days moving average basis) from 15 year rolling average P/E of Nifty 500 Index.

** This will be subject to the overall equity floor of 30%.

*** Fund will have at least 65% exposure to equity and equity related instruments at all points of time. Within this, minimum directional exposure to Equity will not go below 30% and the balance exposure will be invested in derivatives.

The rising and falling variation would be defined as a sequential rise or fall in the variation on a month on month basis that is, the variation for a particular month end would be compared to the variation of the previous month end to ascertain the trend.

Rolling Returns Based on an Investment Period of*		Average return	Median	Minimum	Maximum	Standard Deviation
1 Year	Model	11.69%	9.07%	-33.47%	89.86%	17.36%
	Nifty 500	12.73%	8.93%	-57.13%	98.05%	25.94%
3 Years	Model	11.04%	10.46%	1.26%	26.83%	15.79%
	Nifty 500	11.20%	11.43%	-4.35%	27.66%	24.77%
5 Years	Model	10.45%	9.80%	5.78%	18.74%	8.23%
	Nifty 500	10.33%	11.08%	-2.40%	19.06%	16.39%

The above data is as on December 31, 2023. *Calculated on a monthly basis; Source: Internal Research/NSE Indices. Rolling Returns are the annualized returns of a scheme/index/model taken for a specified period (rolling returns period) on every day/week/month and taken till the last day of the duration. In the above tables, the returns are the Compounded Annual Growth Returns (CAGR) over the rolling returns period on a monthly basis.

Disclaimer: The back testing results given are merely for the purpose of understanding how the model works. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or the Scheme. Past Performance may or may not be sustained in the future.

For actual scheme returns of PGIM India Balanced Advantage Fund, please refer page no. 22.

The returns illustrated above are based on the following assumptions.

Assumptions for performance evaluation

- Nifty 500 + CRISIL Liquid Fund Index for the evaluation of the model.
- Period of January 2007 to September 2024 to include the two largest crashes.
- Rolling returns calculated on a monthly basis since model allocates assets once every month.
- All of the above returns are calculated on a pre-tax basis.

This product is suitable for investors who are seeking*:

- Capital appreciation over a long period of time.
- Investment in equity and equity related securities including the use of equity derivatives strategies and arbitrage opportunities with balance exposure in debt and money market instruments.
- Degree of risk – VERY HIGH

* Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Investors understand that their principal will be at very high risk
